

EKey Turn your phone into a key . . .

AHS
ACCESS HARDWARE SUPPLY

. . . to unlock your car, house, garage door, office, alarm system, or access control system using Bluetooth® technology. Once your phone is registered, its presence will automatically unlock the door, open the garage or disable your alarm. You don't even need to take your phone out of your pocket.

How does it work? First, connect EKey to your electronic door lock, gate, alarm system, garage, or vehicle central locking system. Next, pair your phone with EKey using your PIN. You can register multiple devices this way! Then, just walk within range and the door unlocks; walk beyond the range and it locks behind you.

Benefits

- Hands free locking and unlocking – leave your phone in your pocket
- One less device to carry around – no remote controls or proximity cards to carry or manage
- No more fumbling through pockets and handbags for keys and remote controls
- Works on any Bluetooth device without software installation

All you need to operate the system is a Bluetooth phone or device and an electronic door, gate, alarm, garage, or vehicle central locking system. Applications include magnetic locks, strikes and automatic doors, gates and garages, parking barriers and bollards, key-pad entry systems and alarm systems.
