11G38 Function Description

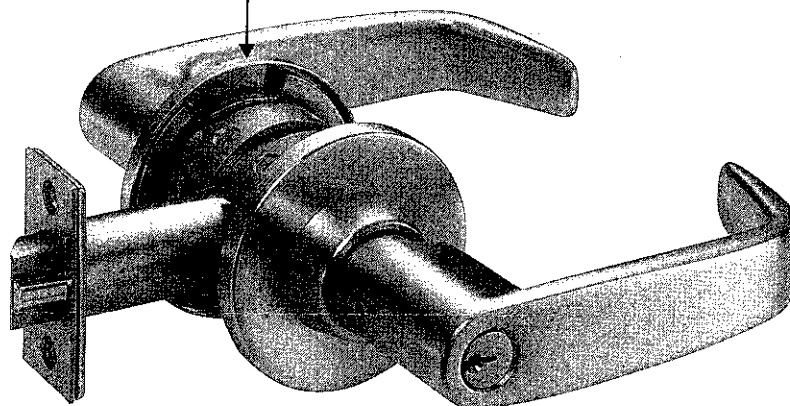

- Guardbolt deadlocks latchbolt
- Latchbolt by either lever unless the outside lever is locked by key in either lever
- Inside lever always operative
- Outside lever locked by key in inside or outside lever; when locked, outside lever can be unlocked only by key on side that initially locked lever
- When outside lever locked by inside key, outside key only retracts latchbolt and does not unlock lever
- Outside key must be rotated completely clockwise before removing key

Locks  Clockwise

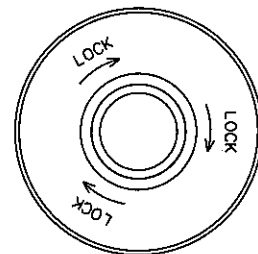

Unlocks  Counter-Clockwise

Inside Key

Inside rose is marked with "LOCK" and direction arrows to indicate locking direction

Outside Key

Locks  Counter-Clockwise
Unlocks  Clockwise

When inside key locks outside lever, outside key retracts the latchbolt but cannot unlock the outside lever. Outside key must be rotated back completely clockwise before removing the key.
