

# LEED Statement

Burns Manufacturing products are manufactured with recycled steel, stainless steel and brass. The percentage of post-consumer and post-industrial recycled content is broken down as follows:

- Steel and Stainless Steel post-consumer recycled content is approximately **5%**
- Steel post-industrial recycled content is approximately **25-40%**
- Burns Manufacturing products average in the approximate **25% to 40%** range of scrap or recycled material melted in the furnace.
- Stainless Steel post-industrial recycled content is approximately **75-80%**
- Brass typically comprises **100%** recycled material, which consists of scrap brass and/or scrap copper, with secondary refined zinc and lead cast from scrap metal and reclaimed by-products. The brass itself is **100%** recyclable.
- Packaging recycled content is approximately **30%**

These figures apply to most of our products, though they may vary slightly per shipment depending on the mill source.
