

# Security-sensitive area doors

Government solutions

Government buildings are full of security-sensitive areas, and managing real-time accessibility of authorized personnel in these areas is essential for ensuring compliance and safety.

Security can be compromised when these doors are propped open, allowing unauthorized persons access to highly sensitive areas. The bottom line is that the doors that protect access to these areas must be able to completely close and latch securely every time.

**Security-sensitive area door operational requirements:**

- Doors are usually secured at all times
- Access allowed by valid credentials or keypad

## Innovative solutions for security-sensitive area doors

Allegion has developed innovative solutions specifically designed to support the needs of security-sensitive areas in government and military buildings.

### Schlage® AD-401 electronic lock

- Schlage offers the only FIPS 201/PIV-compliant wireless integrated reader and lock available today
- The AD-Series is an ideal solution for applications which require approval by the U.S. Federal Government under HPSPD-12\* for FIPS 201-1\*\* compliance
