PROTECT AMERICA'S VA HOSPITALS WITH A MEDECO INTELLIGENT KEY SYSTEM

The Veterans Health Administration (VHA) is responsible for providing a safe and secure environment for staff, patients, and visitors at nearly 170 VA medical centers around the country. Increasingly, these facilities have become targets for security related incidents leading the Department of Veterans Affairs to revise its risk-management policies and standards.

Protecting our Nation's VA Hospitals and Medical Centers with physical security and access control is essential. Medeco Security Locks, an American company revered for its 50+ years of providing high security locks and locking systems, stands ready to assist the Department of Veterans Affairs.

Medeco intelligent key systems will easily retrofit a VA Hospital's existing door hardware to provide system-wide access control and physical security—even on exterior perimeter gates and storage facilities. No hard wiring is required (the power resides in the key), so installation is fast, efficient and cost-effective! Additionally, Medeco offers Intelligent Key system management software for both CLIQ and XT technologies that has been reviewed and approved on the VA Technical Reference Module for use on the OIT network in both self-hosted or VA approved cloud hosted environments.

THE MEDECO SOLUTION PROVIDES:

- Audit accountability to help meet your regulatory compliance standards
- Key access changes for remote employees or contractors using Bluetooth keys and a Smartphone
- Electronic cylinders that can be installed in nearly every opening from the building interior to remote gates, drug cabinets, file cabinets, food storage, etc...
- User-friendly Web-based access management software makes setup and deployment quick and easy
- Third-party software interface capability for data sharing
- Software hosting capability that provides 24/7 secure web access, the latest functionality, catastrophic data recovery, dynamic storage expansion, reduced IT costs, and much more...
