Critical Infrastructure Security Solutions For Wind Power Projects

Experience a safer
and more open world

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world.

PROTECT YOUR WIND POWER PLANT WITH A MEDECO INTELLIGENT KEY SYSTEM

University researchers, hired to identify security weaknesses in U.S. wind power plants, proved just how vulnerable these wind farms can be. The team broke into a single wind turbine by picking its tower door lock in under a minute. Once in, they opened a server door and accessed the turbine's programmable automation controller. Later, using a laptop several miles away, they halted the turbine. They could have stopped every turbine in the project by simply gaining access to one.

Protecting our Nation's Wind Energy Projects with a physical security and access control solution is essential to our national security and economy. Medeco Security Locks, an American company revered for its 50+ years of providing high security locks and locking systems, stands ready to assist America's wind power plants.

A Medeco XT or Medeco CLIQ Intelligent Key System will retrofit existing door and gate hardware to provide system-wide access control and physical security—even on perimeter gates and storage facilities. No hard wiring is required (the power resides in the key), so installation is fast, efficient and cost-effective!

THE MEDECO SOLUTION PROVIDES:

- Audit accountability to help meet your regulatory compliance standards
- Key access changes for remote employees or contractors using Bluetooth keys and a Smartphone
- Electronic cylinders that can be installed in nearly every opening from the building interior to remote gates, substations, wind turbines, etc.
- User-friendly Web-based access management software makes setup and deployment quick and easy
- Third-party software interface capability for data sharing
- Software hosting capability that provides 24/7 secure web access, the latest functionality, catastrophic data recovery, dynamic storage expansion, reduced IT costs, and much more...
