

### Innovation at its core

From the sleek beauty of the L Series to the beyond-Grade-I performance of ND locksets, count on Schlage® for mechanical, electrified and electronic lock solutions. And at the center of them all, are key systems as innovative and diverse as the locks they support.

Schlage's layered security approach to key systems let's you combine standard open security with restricted solutions and those that meet your highest security needs under one keyway design. It's innovative thinking that is flexible and upgradeable to fit your security needs well into the future.

Cams | Keys

Schlage key systems provide patented, restricted, and high security solutions to help protect human safety and the valuable assets of your business. These innovative key systems are designed for flexibility and value. They allow application of open keyways alongside restricted options to appropriately address security levels

on each individual doorway yet working within a single keyway system for maintenance ease and control.

You get the right levels of security where it counts in a facility-wide solution designed to accommodate your budget.

### Use Schlage layered security to your advantage

There are two ways to look at keyway security. The first, administrative security, is about key control. It relates to the barriers you put in place to prevent unwanted duplication. The second, physical security, is based on design features that determine the cylinder's resistance to bypass through picking, bumping or drilling.

Utilizing Schlage's layered security approach, you can apply different cylinder types and levels of administrative control on a door by door basis throughout a facility under a single keyway. You gain budget savings where risks are low, appropriate high-security solutions where needed, and maintenance simplicity.

- 1. Limited dealer controlled programs available. 2. FSIC and Conventional in the form of SL cylinders that accept an SFIC key.

Layer 2: Upgraded security

Everest 29 S Primus XP

Even when perimeter entrances have electronic access in place, those added protections can still be bypassed at the lock cylinder. The Primus XP cylinder mechanism improves physical security and offers the best levels

#### Office doors

Layer 1: Basic security Everest 29 S

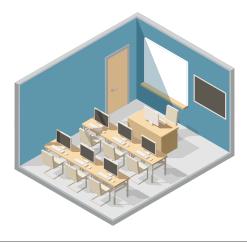

For low risk entries, use of an open keyway can offer greater convenience and management ease. Everest 29 S keys can be duplicated through any Schlage authorized locksmith.

#### Multi-purpose/training room

Layer 2: Upgraded security Everest 29 S Primus XP

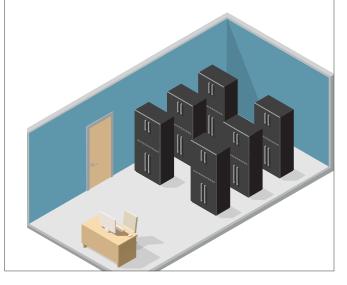

These types of rooms tend to host a wide range of users and contain high value technology assets. Everest 29 S is an open keyway so choosing the Primus XP version makes the key opening this door restricted for improved control over key duplication.

#### Server room

Layer 3: High security Everest 29 S Primus XP with UL 437

Protection of client digital information is critical to this business. The UL 437 option added to a cylinder with Primus XP further improves physical security to the highest industry standard level.

Selection guide

### Where to begin

Schlage layered security

As you begin to define your security needs, there are three important points to consider early on. Your answers to these first few questions will likely influence the balance of choices you make.

- 1. Choose the right levels of security: The level of security needed on your most sensitive or at risk openings will largely define how you approach other areas.
- Determine the right cylinder format: Choice of cylinder is based either on existing locksets or budget considerations when purchasing new and determines what keyway options are available.
- Ensure key system and credential security continuity: Whether or not you have, or intend to have, electronic access control in your facility may also influence your choices.

#### 1. Choose the right levels of security

There are many levels of keyway security. How you choose to apply them in your facility depends on how strictly you need to administer key control and the degree of concern you have around physical security bypass or forced intrusion.

Begin with highest risk openings. This sets the bar for how you approach the rest of the facility. Ultimately you will assess all openings individually for the level of security needed and number of people given access.

#### Primus® XP

Most facilities are in need of higher levels of key control on at least a few openings. Large businesses with high risk assets will want to apply the greatest precautions and may opt for end user controlled Primus® XP keyways that can be made for their exclusive use on a national or regional basis. Midsize and smaller facilities can gain the same benefits of key control on a more local level by engaging a locksmith who offers dealer exclusive Schlage Primus XP keyways.

By incorporating Primus cylinders into your security plan, you gain better administrative control and the option to add UL 437 Primus cylinders. With UL 437 you also gain Schlage's highest levels of physical security in the cylinder.

#### Upgrading an existing key system

Bear in mind that many previously installed Schlage key systems can be seamlessly upgraded to include Primus XP. Schlage Everest® key systems can also be upgraded to Everest 29™ providing new patent protections on the keyway.

#### Scenario 2

A regional hospital chain carries a costly inventory of pharmaceuticals at every facility. Other rooms also have high security needs. These may include patient record rooms, isolation rooms, and even janitorial closets containing harsh chemicals that can pose a liability risk for the hospital. Where highest security is essential, the optimum choice should provide design exclusivity, duplication prevention, and a cylinder that deters break in.

#### 2. Choose the right cylinder format

Whether your project involves new construction or an upgrade to an existing key system, Schlage offers a wide range of cylinder options. In new construction or where lock hardware is being replaced, be sure to consider the impact of long term maintenance. For retrofit, consult with your supplier or Schlage expert to determine how to best upgrade your facility.

#### **Conventional cylinders**

#### Full-size conventional cylinders

Designed specifically for Schlage products, these cylinders are best suited to environments where you have tight key control and little need to periodically rekey. A conventional cylinder commonly requires some disassembly of the lock for removal and replacement.

#### SL cylinders in Conventional and FSIC formats

SL cylinders are uniquely designed to accept the same Schlage A2 key system used in SFIC cylinders. This enables one key system to span three unique cylinder formats: Conventional, FSIC, and SFIC. Where a campus may have both SFIC and Schlage Conventional and/or FSIC cylinder locks in place, a single Everest 29R family keyway can be applied. And, as a 7-pin cylinder, SL offers significantly more keying combinations than 5- or 6-pin cylinders.

#### Interchangeable core cylinders

Interchangeable cores allow cylinder rekey or replacement without disassembly of the lock. They are ideal for larger campuses or facilities with high rates of occupant turnover.

### Small format interchangeable core (SFIC)

Based on an industry standard plug diameter, small format cores are interchangeable in most manufacturers' SFIC compatible products including Schlage, Falcon® and Best® locks. They offer a higher degree of rekeying options without replacing lock hardware.

#### Full size interchangeable core (FSIC)

Full size cores are specific to the lock manufacturer design. They offer more flexibility when it comes to rekeying due to the speed and ease of cylinder replacement but also because they are offered in a wide range of Schlage keyways.

#### 3. Ensure key system and credential security continuity

In buildings where electronic access control is used, true security can only be effective if your key system plan accounts for doors where credential use is present. Most often credential access exists on common area doors and perimeter entrances where limited key distribution is desired. Many facilities also have high security areas where credential use is beneficial.

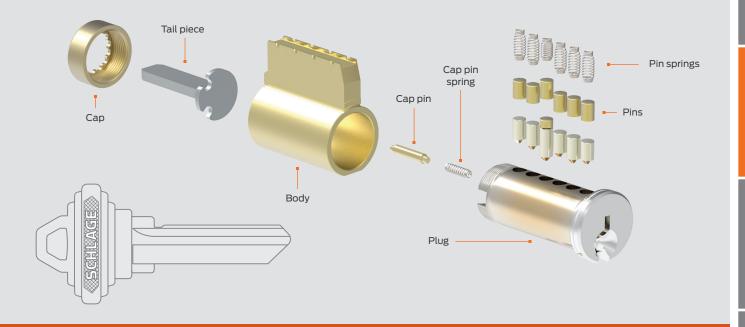

The choice of credential should reflect the highest level of key system security in the building. Credentials are like keys in that they come with varying degrees of duplication control. Any facility employing high security where both keys and credentials are in use, must ensure cohesive application of both.

#### Scenario 3

In the regional hospital chain previously described, electronic access solutions with credentials are also employed to enable monitoring of the use of certain rooms. These include all the high security doors.

High Drug storage and patient record rooms:  MIFARE® DESFire EV1 smart credential use ensures duplication risk is eliminated and user access of the rooms can be monitored	Security	Credential solution

Selection guide

### Schlage Classic keyway

Schlage Classic keyways in the Obverse family provide basic physical security with no restrictions on key duplication. They are best applied as a cost-effective solution on interior doors where asset protection needs and break-in risks are low. They can also be easily upgraded or mixed with Primus XP to gain administrative security control and high security enhancements on the cylinder.

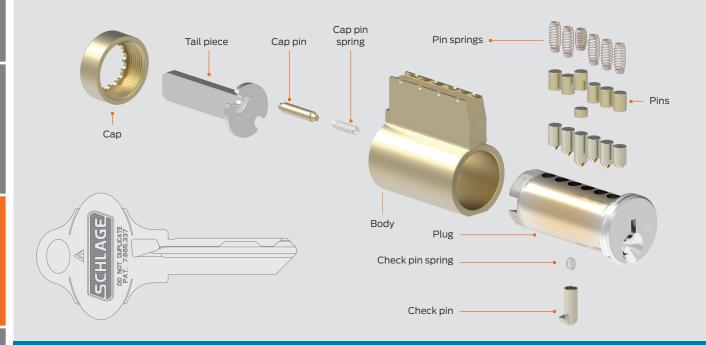

#### **Features and benefits**

Schlage Classic keyways can be used as a light commercial solution in small to medium sized facilities where ease of duplication and readily available local servicing is desired. Keys can be duplicated at most retail key cutting services without restriction. When desired, facility security can be improved by upgrading perimeter and other primary or high security areas to restricted Classic Primus XP keyways.

- Classic Obverse keyways do not require any ordering formalities
- The Obverse keyway family includes C keyway (standard) and 6 additional options
- Compatible to Schlage Classic Primus XP
- Additional drill resistance features available with UL437 option on Classic Primus XP cylinders
- Available in conventional (key-in-lever) and FSIC formats

- Cylinders available to fit an extensive list of competitor's locks
- Master keying available for all levels
- Available in 5- or 6-pin lengths
- Key duplication on standard (basic) key cutting equipment
- Legacy keyway cylinders and keys, restricted Quad, Numbered and Reverse, continue to be available to order (see current terms and conditions for additional order requirements)

### Everest 29 keyways

The essential building blocks of a well protected Schlage key system begin with Everest 29 keyways. These keyway families offer the greatest levels of versatility as part of layered security plan and the greatest compatibility to existing Schlage and competitive locksets.

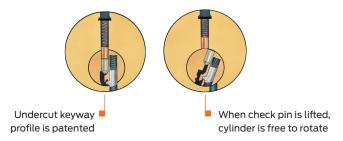

#### Patent protection to 2029

Everest 29 key systems protect against unauthorized duplication two ways. First, key blanks are tightly controlled by Schlage to ensure access for only authorized dealers. Secondly, patent protection deters duplication of the design—an offense subject to federal law. They are available as both open and restricted keyways to give you the level of security you need for every application.

#### **Benefits**

- Key: through-cut technology enables a unique undercut key design; 20% increase in thickness for greater strength
- Cylinder: unique check pin interaction improves physical security of the lock

Everest 29 keys work by lifting the check pin when the key is inserted into the cylinder allowing the key to turn and the lock to rotate open. This patented interaction ensures the integrity of the system at every opening.

#### **Best practices: Everest 29**

Everest 29 is designed with both new construction and retrofit in mind. For new construction, you have the opportunity to define a full spectrum of layered security utilizing Everest 29, and Everest 29 Primus XP with and without the UL 437 option (see page 6). For retrofit applications, Everest 29 is made to be integrated into many existing systems.

- Available formats: Conventional and FSIC (S and T families); Conventional SL and SFIC (R family)
- Backward compatible to Everest keyways
- Cylinders available to fit an extensive list of competitor's locks
- Multiple key sections

#### **Upgrade legacy Everest systems**

Everest 29 keyway families are each backward compatible to specific Everest B, C and D keyway families making migration of an existing key system less complex. You can selectively upgrade cylinders in your facility to regain patent protection. In both Everest and Everest 29 cylinders, Primus XP upgrades can be applied where security is most critical.

Note: Everest 29 keys will work in an existing Everest keyway, but legacy Everest keys will not work in a new Everest 29 keyway.

Selection guide

Everest 29

Primus XP

Cylinders | Cores

Cams | Keys

### The SL advantage

The exclusive SL cylinder creates an opportunity to unify separate key systems into one restricted, A2 key system upgradeable to Primus XP security. Offered in both Conventional and Full Size Interchangeable Core (FSIC) formats, the SL cylinder utilizes the same Everest 29 R keyway family as Schlage Small Format IC cylinders.

#### **Patented SL**

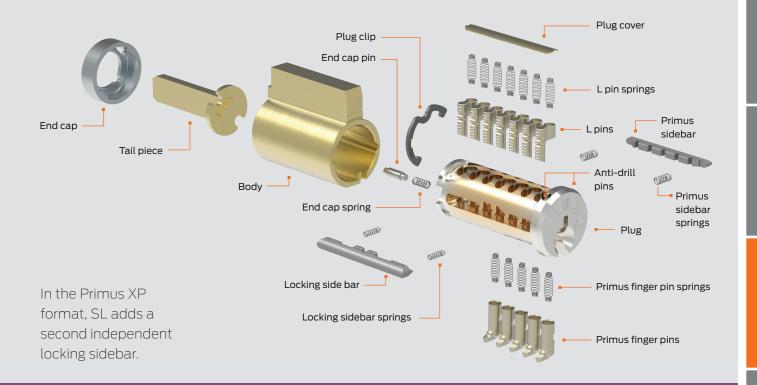

A unique L-pin design allows SL cylinders to accept the 7-pin length common to SFIC cylinders. Security features include the check pin standard in Everest 29 cylinders plus an added independent locking sidebar. In its Primus XP form, SL is the only Schlage cylinder to utilize two sidebar mechanisms making it nearly impossible to bypass.

Using SL cylinders, one key system can span three distinct formats: Conventional, FSIC and SFIC. It is a cost effective solution for unifying a large campus key system. Simply replace cylinders rather than locks. You gain a more secure and manageable system in a 7-pin design that allows you the highest number of Schlage key combinations possible.

#### **Benefits**

- Allows Everest 29 R and Everest B keyway families to be compatible to all three cylinder formats
- As a 7-pin cylinder, SL offers the greatest number of Schlage keying combinations
- It creates a path to a unified, restricted key system without having to replace locks
- Enables Primus XP exclusivity and physical security features to be introduced into an SFIC-based facility

### Upgradeable to Primus XP security

#### Best practices: SL cylinder use

In new construction with Schlage locksets, use SL on large facilities or multi-site campuses to create up to 16,384 unique key combinations per keyway. When retrofitting, SL cylinders in Conventional or FSIC cylinder locksets can be added to an existing SFIC-formatted key system to gain the security and control of the Primus XP geographically restricted key program. Use SL anywhere a campus has a combination of SFIC cylinders and Schlage or other compatible locksets with Conventional or FSIC cylinders to unify the key system.

- Available formats: Conventional and FSIC (Everest 29 R and Everest B families)
- Key duplication on standard (basic) key cutting equipment
- SL cylinders fit all Schlage and Falcon® cylindrical locks
- Conventional SL cylinders fit Schlage modular system for use in mortise and rim applications
- Cylinders available to fit an extensive list of competitor's locks

#### **Upgrade legacy Everest B systems**

Everest 29 R keyway is backward compatible to the legacy Everest B keyway family making it possible to upgrade even older SFIC cylinder B keyway systems to Primus XP.

Note: Everest 29 R family keys will work in an existing Everest B keyway, but legacy Everest B keys will not work in a new Everest 29 R keyway.

#### Compatibility

Legacy Patent protected Everest<sup>1</sup> Everest 29

- 5516
  - Restricted keywayLetter of authorization required

#### The L pin

The patented SL cylinder has a unique L pin design allowing a single, unified Everest 29 R key system to be applied to both SFIC and Schlage conventional cylinder locks.

# Ordering LOther

#### **Everest 29 specifications**

# Everest 29 S family – open keyway

Everest 29 keyway families include one open keyway. The S keyway is the standard keyway for all Schlage locksets sold today.

#### **Ideal application**

- Commercial use only
- Best suited to applications where the convenience of fast local key duplication is preferred with no ordering formalities

#### **Keys**

- 20% thicker key for greater strength
- Patented through-cut design
- Protected against unauthorized manufacture and distribution by U.S. patent 7,665,337 until 2029
- Keys stamped DO NOT DUPLICATE are available as an option

#### Cylinders/cores

- S123 keyway is provided as the standard keyway on all Schlage locks unless specified otherwise
- S145 keyway is available for master keyed products
- Full size Conventional cylinder
- Full Size Interchangeable Cores (FSIC)
- 6-pin cannot be interkeyed with any 5- or 7-pin cylinders
- Check pin design on the cylinder improves physical security of the lock

#### Compatibility

- Everest 29 S family keys are backward compatible with Everest C cylinders, but Everest C keys will not operate an Everest 29 S cylinder.
- Everest 29 S keyways are available in Primus XP high security cylinders at levels 7, 8, and 9.

#### Establishing a new key system

- No ordering or set up formalities
- S145 is the default keyway for new Schlage master key systems. Additional keyways are used to expand systems which need more than one keyway

#### Ordering products for existing systems

Locks, cylinders, cores and keys are available through any authorized locksmith dealer or authorized distributor

#### **Key duplication**

Everest 29 S family keys can be cut on Pro-Lok's Blue Punch for Schlage (recommended). You can also use rotary cutter key machines to duplicate these keys or cut them by code. Standard Schlage depths and spacing are used, so there are no new settings for code machines.

#### **Pin kits**

Cylinders with S family keyways are compatible with all existing Schlage pin kits. Pinning Kit 40-119 is the standard Schlage commercial pin kit.

#### Sales samples

Sales samples of the S123 keyway are available in Conventional or FSIC cylinders. Ask your Schlage sales representative for more information.

# Everest 29 T family – end user restricted keyway

**Everest 29 specifications** 

Everest 29 keyways include two restricted keyway families. They are defined by cylinder type and method of key control.

#### **Ideal application**

- Large facility applications where key control is most critical and can be properly managed internally
- Key cutting and cylinder servicing can be managed internally or through your trusted local locksmith provider

#### **Keys**

- 20% thicker key for greater strength
- Patented through-cut design
- Protected against unauthorized manufacture and distribution by U.S. patent 7,665,337 until 2029
- All keys are stamped DO NOT DUPLICATE

#### Cylinders/cores

- Full size Conventional cylinder
- Full Size Interchangeable Cores (FSIC)
- 6-pin cannot be interkeyed with any 5- or 7-pin cylinders
- Check pin design on the cylinder improves physical security of the lock

#### Compatibility

- Everest 29 T family keys are backward compatible with Everest D cylinders, but Everest D keys will not operate an Everest 29 T cylinder.
- Everest 29 T keyways are available in Primus XP high security cylinders at level 9 only.

#### Establishing a new key system

- Use of Schlage electronic validation or a letter of authorization on the end user's official stationery establishes the authorized ship-to location(s)
- Ship to locations can be specified as local Schlage authorized locksmith dealers

#### Ordering products for existing systems

Restricted locks, cylinders, cores and keys on each subsequent order will be drop shipped to the location specified by the end user.

#### **Key duplication**

Factory provides key blanks which can be cut on key punch #40-099, or use rotary cutter key machines to duplicate these keys or cut them by code. Standard Schlage depths and spacing are used, so there are no new settings for code machines.

#### Pin kits

Cylinders with T family keyways are compatible with all existing Schlage pin kits. Pinning Kit 40-119 is the standard Schlage commercial pin kit.

#### Sales samples

Restricted keyways are not available as sample cylinders; however, the key and mechanism can be evaluated with an Everest 29 S family sample. The only difference is the shape of the keyway.

#### **Everest 29 specifications**

### Everest 29 R family – end user restricted keyway for SFIC

The Everest 29 R keyway features both end user and dealer controlled options.

#### **Ideal application**

Best applied in large facilities with in-house locksmiths to cut keys and combinate cores.

#### **Keys**

- 20% thicker key for greater strength
- Patented through-cut design
- Protected against unauthorized manufacture and distribution by U.S. patent 7,665,337 until 2029
- All keys are stamped RESTRICTED

#### Cylinders/cores

- Small Format Interchangeable Cores (SFIC)
- Conventional SL cylinder accepts the Everest 29 R keyways
- 7-pin only
- Check pin design on the cylinder improves physical security of the lock

#### Compatibility

- Everest 29 R family keys are backward compatible with Everest B cylinders, but Everest B keys will not operate an Everest 29 R cylinder.
- Everest 29 R keyways are available in Primus XP high security conventional SL cylinders at levels 7, 8, and 9.

#### Establishing a new key system

- Use of Schlage electronic validation or a letter of authorization on the end user's official stationery establishes the authorized ship-to location(s)
- Ship to locations can be specified as local Schlage authorized locksmith dealers

#### Ordering products for existing systems

Restricted keyway locks, cylinders, cores and keys on each subsequent order will be drop shipped to the location specified by the end user.

#### **Key duplication**

R family keys can be cut on a special version of the Blue Punch available through Schlage as 40-071. It is not possible to retrofit any existing Best or Blue Punches to cut B and R family keys. You can also use a rotary cutter key machine to duplicate these keys or cut them by code. The stop is at the shoulder of the key, even though the bittings are read and written tip to bow. This merely requires using new spacing specifications on existing rotary cutter code machines.

#### Pin kits

All Schlage small format cores are compatible with most brands of A2 system kits. However, Schlage does not recommend using Arrow™ or Kaba Peaks bottom pins in Everest cores. If you do not already have an A2 pin kit, you can purchase Schlage SFIC pin kit 40-129. SL cylinder requires 40-247 pinning kit.

#### Sales samples

Sales sample cores have the R125 keyway. No key blanks or uncombinated cores are available for samples since this is a restricted keyway. Each sample core comes with one operating key and one control key. Please specify sales samples when ordering.

# Everest 29 R234 and R235 keyways – locksmith, contract hardware dealer, and Security Center restricted SFIC keyway option

Everest 29 keyways include two restricted keyway families. They are defined by cylinder type and method of key control.

#### **Ideal application**

**Everest 29 specifications** 

- R234: Sold exclusively through Schlage Authorized Security Centers for use with national accounts
- R235: Locksmiths who service large facility end users with SFIC cylinders and no on-site facility locksmith

R235: Also available to Schlage contract hardware dealers (dealers) who provide complete key cutting and master keying service to their end users and actively promote and sell SFIC restricted key systems

#### Keys

- No geographical exclusivity
- Dealer ID number is stamped on all keys for tracking purposes
- Keys will always be drop-shipped to dealer location

#### Cylinders/cores

- Small Format Interchangeable Cores (SFIC)
- Conventional SL cylinder accepts the Everest 29 R keyways
- 7-pin only
- Check pin design on the cylinder improves physical security of the lock

#### Compatibility

Everest 29 R family keys are backward compatible with Everest B cylinders, but Everest B keys will not operate an Everest 29 R cylinder.

#### Establishing a new key system

 R234: \$3,500 (list price) inventory order commitment and signed Everest 29 R234 agreement (For existing R235 dealers inventory order committment of \$1,000.)

- R235: \$2,500 (list price) inventory order commitment for uncombinated cores and key blanks (for existing Primus or Primus XP dealer \$500 commitment) and signed Everest 29 R235 agreement to maintain the security of key blanks (provided by local Schlage sales manager)
- Participating locksmith, dealer or center (sellers) are assigned an ID number by Schlage which is stamped on all key blanks ordered

#### Ordering products for existing systems

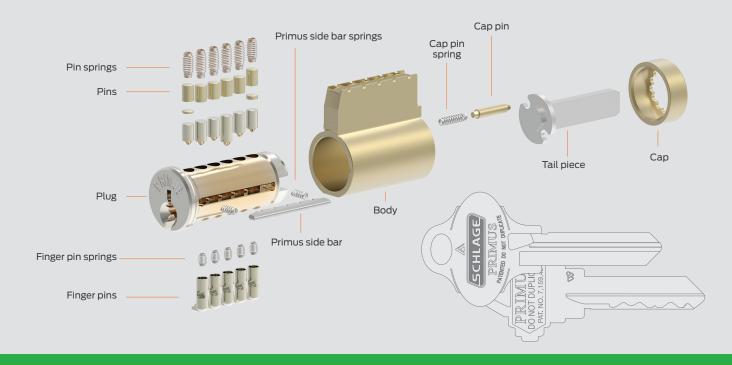

- Provide assigned ID with order
- Blank keys are drop-shipped by Schlage directly to the seller
- Cores can be purchased through participating wholesalers and are furnished uncombinated (0-bitted small format cores are not available)
- Factory master keying is available

#### **Key duplication**

- Locksmiths, dealers and centers are not permitted to cut keys for any system set up by another seller identified by the ID number on the key
- Keys must be cut by the locksmith, dealer or center – no blanks can be sold to end users or institutional locksmiths
- End users are able to purchase from originating seller only – a sole source relationship
- See detail on facing page for equipment required for key cutting

#### Pin kits

See detail on facing page for pinning kit information.

### Primus XP security

Critical points of entry and highly sensitive areas need extra protection. Here, Schlage cylinders with added Primus XP features can be applied to improve levels of both physical and administrative security. Even Schlage Classic Obverse open keyways gain the same levels of physical security as Everest 29 keyways with Primus XP features added to the cylinder.

#### **Patent protection**

The Primus XP cylinder and key design features are patent protected through 2024. Where applied to the Schlage Classic Obverse keyway this provides a layer of protection not available on Classic as an open keyway. If applied to an Everest 29 based key system, the Everest 29 patent protection to 2029 overrides Primus XP patents for many more years of protection against design duplication.

#### **Benefits**

- Key: unique side bit milling designs can be assigned to dealer or end user with various levels of geographic exclusivity
- Cylinder: independent sidebar and finger pin locking mechanisms increase pick and bump resistance

Primus XP keys with patented side bit design engage both top pins and bottom finger pins independently. The lock can only turn when the Primus sidebar fully seats onto the finger pins.

#### **Best practices**

Primus XP helps you achieve the highest levels of key system security. It can be applied anywhere human safety and asset protection is most critical. Examples include perimeter doors on schools, server rooms, financial and HR record rooms, labs, IT, or government facilities. If break-in is a concern, the UL 437 option available only on Primus XP, can help mitigate risk.

- Backward compatible to legacy Everest and Primus keyways
- Fits an extensive list of competitor's locks
- Multiple levels of master key hierarchies available

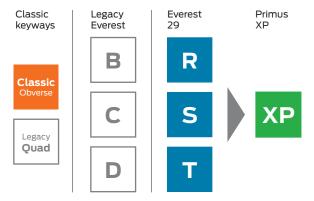

#### **High security**

Add UL437 for the highest protection Optional UL437 listed cylinders feature hardened steel drill pins. They are tested and certified to be pick and drill resistant and can withstand extreme physical attacks.

#### Upgrade security

Primus XP is compatible with all current and many legacy Schlage keyways. This allows facility upgrades to improve security while keeping the convenience of the existing single key system intact.

Primus XP cylinders can be keyed alike to existing compatible keyway cylinders. Here, the Primus XP key will work in the existing cylinders, however, non-Primus keys cannot operate the Primus XP cylinders.

Selection guide

### The height of security

Among the many Schlage cylinder options, Primus XP products with UL 437 listed physical security improvements let you utilize the highest levels of Schlage key system security. With Primus XP you can control patented side bit milling designs with exclusivity based on geographic area to the level that best suites your security needs.

#### Levels and exclusivity

The Primus program features multiple levels of security. For both Classic and Everest 29 Primus XP systems, security increases as geographic area gets larger because opportunity diminishes for the uniquely milled key blank to be available from more than one source within the area.

At every level that is 1+ or greater, an appropriate I.D. card and/or signature verification for key duplication is available. All levels utilize patent-protected Primus cylinders and keys to guard against unauthorized duplication. To select the proper level of security, consideration should be given to degree to which key control in needed, the initial commitment, and whether the key system maintenance is by a local locksmith or internally managed.

		P	Primus® XP Le	evels	Cylinde	and key ordering	process	
	Classic	Everest 29™	Exclusivity	Commitment	End user	Dealer	Shipping	
rolled	1		None	None	Order through any authorized Schlage dealer	Standard order	To dealer from distributor

Dea	2	8	Time zone	Primus XP inventory order	XP dealer only	keyway section name or number	from factory	
	3U	9U	Random (not exclusive)	Initial purchase of 59 or fewer cylinders				
rolled	3G	9G	Zip code (first 2 digits)	Initial purchase of 60 or more cylinders	Provide signed face	Dealer to provide end		
End user controlled	4Z	9Z	Time zone	Initial purchase of 2,000 or more cylinders or alternative fee based arrangement	sheet with order specifying keyway to any Primus XP authorized dealer	user's Primus XP I.D. and keyway section name or number	End user determined	
ш́ l	4N	9N	Nationwide	Initial purchase of 4,000 or more cylinders or alternative fee based arrangement				

### Classic Primus XP purchasing and distribution exclusivity

The Primus XP keyway provides various levels of geographic exclusivity and requires authorization for duplication, ensuring better key control.

#### Level 1 Non-exclusive

**Purchasing and distribution** 

#### **Highlights:**

- No exclusivity for side bit milling shared by all dealers and distributors
- Dealer can purchase products from any Schlage Primus XP authorized dealer
- End user can purchase from any Primus Level 1 authorized dealer, no sole-source relationship

#### To set up a new dealer:

Submit a Classic Primus XP Level 1 signed agreement to the distributor

### Level 1+ Zip code exclusivity based on first three digits

#### Highlights:

- Dealer-owned side bit milling exclusivity based on the first three digits of zip code
- Dealer can purchase products from any Schlage Primus XP authorized distributor
- Available to direct and indirect dealers
- Key blanks are not available to end users
- End user must purchase from originating dealer, sole-source relationship

#### To set up a new dealer:

- Submit Classic Primus XP Level 1+ signed agreement
- For dealers who are new to Primus, submit purchase order of a total of \$7500 (list) to cover both Classic and Everest Primus inventories
- For those who are existing Primus dealers, submit purchase order of a total of \$5000 (list) to cover both Classic and Everest Primus inventories

#### Re-ordering customers need to:

- Provide dealer ID and Primus sequence number with order
- Primus keys will always be drop-shipped to dealer location

### Level 2 Time zone exclusivity

**Purchasing and distribution** 

#### **Highlights:**

- Dealer-owned side bit milling exclusivity based on time zone
- Dealer can purchase products from any Schlage Primus XP authorized dealer
- Available for direct and indirect dealers
- Key blanks are not available to end users
- End user must purchase from originating dealer, sole-source relationship

#### To set up a new dealer:

- Submit Classic Primus XP Level 2 signed agreement
- For dealers who are new to Primus XP, submit purchase order of a total of \$25,000 (list) to cover both Classic and Everest Primus XP inventories
- For existing Primus dealers, submit purchase order of a total of \$15,000 (list) to cover both Classic and Everest Primus inventories

#### Re-ordering customers need to:

- Provide dealer ID and Primus sequence number with order
- Primus keys will always be drop-shipped to dealer location

#### Levels 3 and 4 End user exclusive

These levels are for end users who may want to cut their own keys and/or must be able to obtain competitive bids on subsequent additions to their Classic Primus XP key system.

#### Highlights:

- Side bit milling is assigned to end user, not dealer, based upon commitment level
- End user is not tied to originating dealer, but can purchase from any Schlage Primus authorized dealer
- Key blanks are available for end user only
- Face sheet is required for each subsequent order

#### To set up a new dealer:

- Submit signed signature sheet
- Submit signed face sheet
- Submit an order with the above two items

#### Re-ordering customers need to:

- Submit signed face sheet with order
- Specify keyway on order form

#### Level 3U (universal) - fewer than 60 cylinders

Schlage randomly assigns a side bit milling from a small pool of combinations which may be repeated locally. There are no guarantees of geographical exclusivity.

**Level 3G (geographical) – more than 60 cylinders**Schlage assigns an exclusive side bit milling based on the first two digits of the end user's zip code.

**Level 4Z (time zone) – minimum of 2,000 cylinders** Inventory of 2,000 cylinders must be maintained over two years or pay a fee. End user buys exclusivity of one side bit milling within his time zone and country.

### Level 4N (nationwide) – minimum of 4,000 cylinders

Inventory of 4,000 cylinders must be maintained over two years or pay a fee. End user buys nationwide exclusivity of one side bit milling.

### Everest 29 Primus XP purchasing and distribution exclusivity

When you upgrade your key system to Primus XP, you automatically move up to one of our three highest security levels: 7, 8 or 9. These levels offer different methods of distribution and purchasing that are important to understand when choosing a key system that meets your needs for flexibility, security, and ongoing service and maintenance.

#### Levels 7 and 8 Dealer exclusive

**Purchasing and distribution** 

Locksmith/dealer invests in a side bit milling that will be exclusive to him on a zip code- or time zonebased geographic area. Dealers sign an agreement that ensures the integrity of the system and, among other things, prohibits the dealer from cutting other dealers' keys. Each dealer is assigned a unique ID number that is stamped on all keys. They sell product with this side bit milling to their end user customers.

The dealer then issues an ID card to each end user and verifies orders for duplicate keys against the signature panel on the card.

#### **Highlights:**

- Dealer-owned side bit milling exclusivity
- End user must purchase from originating dealer, sole-source relationship
- Available to direct and indirect dealers
- Product can be purchased from any Schlage Primus XP authorized wholesale distributor

#### To set up a new Primus XP account:

- An Everest Primus XP signed agreement must be submitted
- An initial inventory purchase must be made covering both Classic and Everest 29 Primus XP products
- Dealer to provide dealer ID and key section with
- Primus keys and assembled cylinders will always be drop-shipped direct to dealer from the factory
- Unassembled cylinders and cylinder parts can be purchased through wholesale distributor

#### **Details and purchase order commitments**

#### Level 7 (zip code)

Schlage will assign an exclusive side bit milling based on the first three digits of the locksmith/ dealer's primary physical location zip code.

Initial purchase requirement (list price)

- New Primus XP dealers: \$7,500
- Primus dealers upgrading to Primus XP: \$5,000

#### Level 8 (time zone)

Schlage will assign an exclusive side bit milling based on the dealer's time zone and country.

Initial purchase requirement (list price)

- New Primus XP dealers: \$25,000
- Primus dealers upgrading to Primus XP: \$15,000

### Level 9 Fnd user exclusive

**Purchasing and distribution** 

This level is for end users who may want to cut their own keys and/or must be able to obtain competitive bids on subsequent additions to their Everest 29 Primus XP key system. Level 9 is subdivided to provide varying degrees of side bit milling exclusivity, depending on the amount of cylinders purchased, and is comparable to Classic Primus XP levels 3 and 4.

#### **Highlights:**

- Side bit milling assigned to end user, not dealer, based upon commitment level
- End user is not tied to originating dealer, but can purchase from any Schlage authorized Primus dealer
- Key blanks are available for end user only
- Face sheet is required for each subsequent order
- Available in Everest 29 S and Everest 29 T key sections

#### To set up a new Primus account:

- Submit signed signature sheet
- Submit signed face sheet
- Submit an order with the above two items

#### Re-ordering customers need to:

Submit signed face sheet and specify key section with order

#### Level 9U (universal)

End user buys fewer than 60 cylinders and may share a side bit milling with another small end user in the same area.

#### Level 9G (geographical)

End users buys 60 cylinders or more; Schlage assigns a side bit milling exclusive within the first two digits of the end user's zip code.

#### Level 9Z (time zone)

End users buys a minimum of 2,000 Primus XP cylinders over a two-year period or buys the exclusivity outright; Schlage assigns a side bit milling exclusive within the end user's time zone. Inventory must be maintained over two years or pay a fee.

#### Level 9N (nationwide)

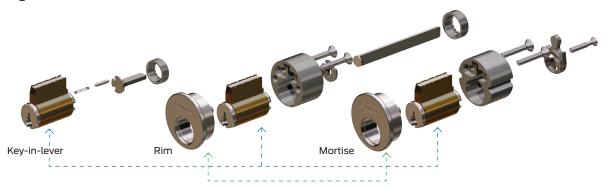

End user buys a minimum of 4,000 Primus XP cylinders over a two-year period or pays for the exclusivity outright; Schlage assigns a nationwide exclusive side bit milling. The end user is free to purchase Level 9 Primus XP products from any Schlage Primus XP dealer nationwide, rather than being tied to a sole source dealer. All Level 9 key systems require a Primus XP signature card to be submitted initially and a Primus XP Face Sheet to accompany every order. Schlage's Key Control Department verifies the signature for each Level 9 order.

### Modular, conventional cylinders fit your needs

Schlage conventional cylinders offer extreme versatility in a modular design. One full-size conventional cylinder can be applied for any Schlage key-in-lever, rim or mortise need. You save on inventory costs and gain flexibility on the job.

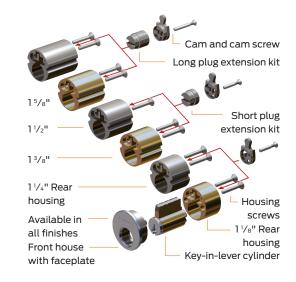

- The modular cylinder design can accept any Schlage keyway family
- Solid brass bar stock cylinder construction and hardened stainless steel housings
- Rear mortise cylinder housing sizes range from  $1^{1}/8$ " to  $1^{3}/4$ "

- Fits all Schlage locksets and deadbolts
- 13 face finish options, six mortise housing lengths, one rim housing, four plug face finishes, six tail-pieces and nine cam options create a thousand potential cylinder configurations

#### **Parts**

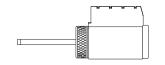

Modular cylinders use fewer parts because the cylinder and a small number of screws, cams and plug extensions can be universally applied. The major of parts are simply the rear housings in various lengths and finishes.

#### Mortise and rim front housing finish options

**Key blanks** 

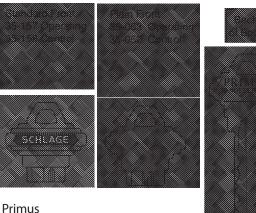

### Classic

Numbers show are for key blanks. For cut keys, change "35" prefix to "48" for change keys and "49" for master keys. Suffix key section, e.g. 35-101 E. See facing page for available key sections.

#### **Standard**

#### **Primus XP**

Standard Front 35-157 Operating 35-158 Control

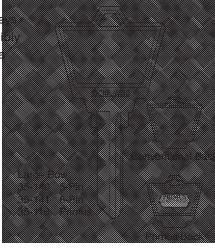

Plain Front 35-053 Operating 35-052 Control

#### Standard bow

To order conventional key blanks with DO NOT DUPLICATE, specify XQ06-878. Specify plain bow keys for applications when keys must be stamped with additional information such as special die stamps, serial numbering, etc.

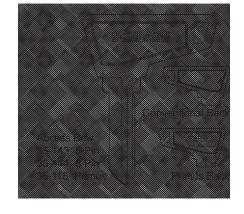

### Large bow

Ideal for special ke which must be vis distinctive within a key system, or for very specialized marking.

### **Access bow**

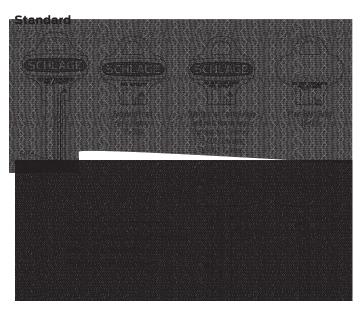

Conforms to California Title 24 for handicap access.

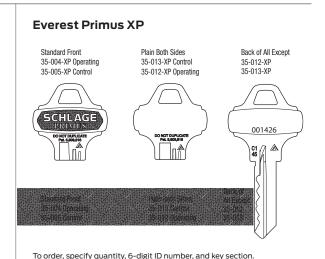

Specify control keys in architectural specifications and on purchase orders.

**Key blanks** 

### Everest full size key blanks

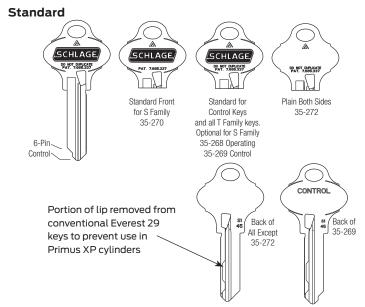

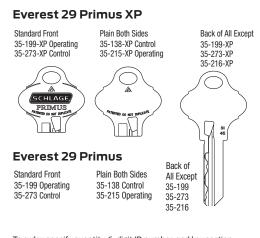

Key blanks are packed 50 per box, 1000 per case. Specify Control Keys in architectural specifications and on purchase orders.

Everest conventional keys are available with and without DO NOT DUPLICATE. Specify plain bow keys for applications when keys must be stamped with additional information such as special die stamps, serial numbering, etc.

### Everest 29 full size key blanks

Numbers shown are for key blanks. For cut keys, change "35" prefix to "48" for change keys and "49" for master keys. Suffix key section, e.g. 35-270 S123. See facing page for available key sections.

To order, specify quantity, 6-digit ID number, and key section. Key blanks are packed 50 per box, 1000 per case. Specify Control Keys in architectural specifications and on purchase orders.

Everest 29 conventional keys are available with and without DO NOT DUPLICATE. Specify plain bow keys for applications when keys must be stamped with additional information such as special die stamps, serial numbering, etc.

### SFIC key blanks

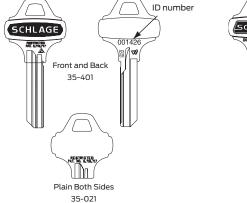

For cut keys, change "35" prefix to "48" for change keys and "49" for master keys. Suffix key section, e.g. 35-009 R123. All keyways are restricted so they are not published.

SL

Everest B and Everest 29 R family end user restricted keyways are not stocked by locksmiths or other dealers. They are drop shipped directly to the end user and offer restricted protection without geographical exclusivity. All orders for these key blanks require a letter of authorization from the end user. Dedicated SFIC keyways are available to locksmiths and service-oriented contract hardware dealers, this keyway is controlled similar to Primus XP Levels 1+ and 7. See page 19 for details.

### Notes:

- 1. Specify keyway and finish.
- 2. Keys and tailpieces/cams must be ordered separately.

### Cylinder and Primus selling tools

### Primus XP I.D. cards

**Equipment** 

Primus XP I.D. cards are used as authorization credentials for Primus XP Level 1, 1+, 2, 7 and 8 keys. Cards have a signature panel on the back and are issued by the servicing locksmith or dealer who directly supports the system owner. The owner must present the I.D. card to obtain duplicate keys or additions to his system. The signature will be validated by the dealer.

Primus XP Cards		
Level	Number

Modular cylinder sales kit Part # 40-224

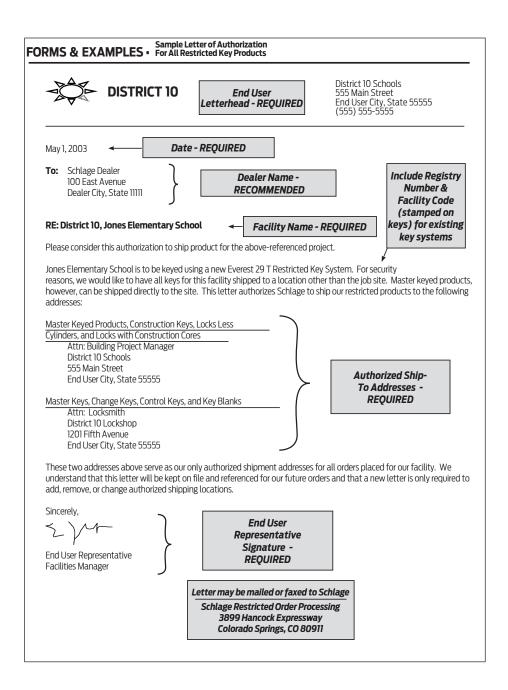

### Order authorizations

#### **Electronic validation**

The mycredentials.allegion.com website allows users to easily manage all order authorizations for restricted key systems. It eliminates paperwork by providing a secure communication portal for generating restricted product authorizations. You can create electronic face sheets, review order authorization history, and manage who can generate restricted product authorizations.

#### Fax or mail in method

An alternate means of providing authorization can be done on company letterhead for end users. The sample below illustrates the information needed when using this method.

### Specifications

**Specifications and certifications** 

### Standard conventional keving

#### **Everest 29**

Everest 29 products are available to commercial customers. When no other keyway is specified on a commercial customer's order, Schlage supplies Everest 29 keyways in a S123 keyway for stock products and in a S145 keyway for master keyed products. All Everest 29 conventional cylinders have six standard pins and a check pin. Legacy Everest keyways are available, but must be specified at the time of ordering.

#### Classic

Classic products are supplied upon request to commercial customers and are the standard keyway for residential customers. C keyway is the default for stock products and E keyway is supplied for master keyed products.

#### **Primus XP**

Primus XP products are available to qualifying commercial customers. All Primus XP cylinders have six standard pins and five finger pins.

### **Keys**

Classic cylinders are supplied with two 5-pin keys unless otherwise specified. All Everest 29 and Primus XP pinned cylinders are supplied with two 6-pin keys, except certain stocking levels of Primus XP which are supplied less key blanks (LKB) for security reasons.

#### **Keying options**

Keying options include master keying, grand master keying and construction keying. Construction master keying is not available for Primus XP cylinders; however, construction cores can be furnished if the job is interchangeable core.

#### Warranty

Three year limited mechanical warranty and one year limited electromechanical warranty. Everest 29 Primus, Everest 29 Primus XP, Everest Primus. Everest 29 Primus limited lifetime key breakage warranty. Portable security limited lifetime warranty.

### **Software**

All Schlage cylinders and keys can be used in conjunction with SITEMASTER 200® key control management software for highly effective key control.

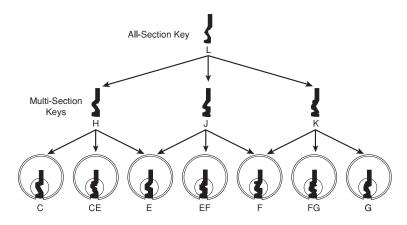

### Certifications

#### UL/cUL

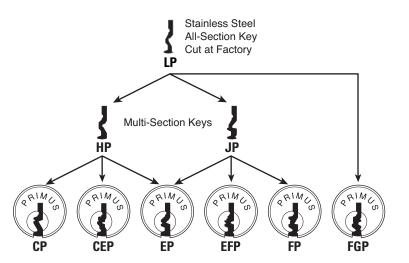

20-5XX Series Primus cylinders are UL 437 Listed locking cylinders.

### The classic keyway family

Obverse keyways for classic conventional cylinders

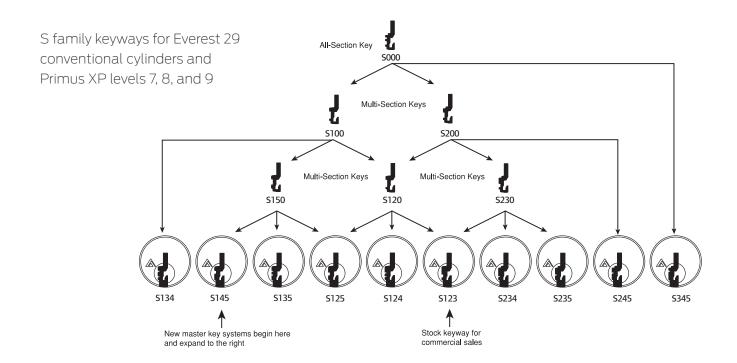

Obverse keyways for Classic Primus XP cylinders levels 1 through 4

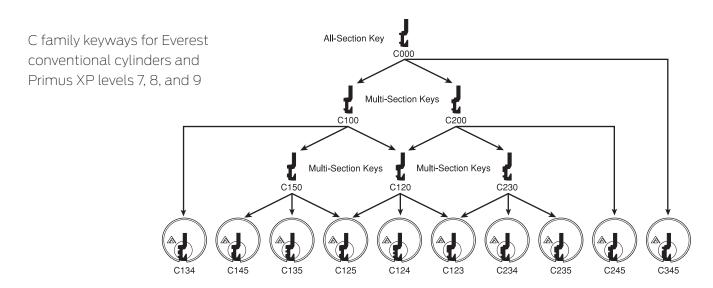

Selection guide

**Keyway diagrams** 

### Everest 29 S keyway family

### Everest keyways

### Useful definitions

**Bitting** - the numbers which represent the cuts of a key; the actual cuts or combination of a key.

**Blade** - the part of a key that may contain the cuts and the millings.

**Body** – the part of the cylinder that surrounds the plug, usually containing tumbler chambers corresponding to those in the plug.

**Bottom pin** - a cylindrical shaped tumbler with a conical point at the end that comes in direct contact with a key.

**Bow** - the portion of the key that serves as the grip or handle.

**Cam** - a lock or cylinder component that transfers the rotational motion of a key or cylinder plug to the bolt that works the lock.

**Capping block** - a fixture used to aid installation of caps on small format interchangeable cores.

**Change key** - a key that operates one cylinder or a group of keyed alike cylinders in a key system.

**Construction cores** - temporary cores for use during the construction phase of a building that can later be easily removed and replaced with permanent cores.

**Control key** - a special key used for the removal and replacement of an interchangeable core.

**Ejector pin** - a tool used to drive all the elements of a pin chamber out of small format interchangeable cores.

**High security cylinder** - a cylinder that offers a greater degree of resistance to picking, bumping, impressioning, key duplication, drilling or other forms of forcible entry. The keys also are controlled so only authorized people can make duplicates.

**Housing** - that part of a locking device designed to enclose the core.

**Interchangeable core** - a cylinder designed to be removed and/or installed with only a special key called a control key; no tools or removal of the lock required to change the core.

**Key blank** - an uncut key manufactured to allow its entry into the keyway of a specific cylinder.

**Master key** - a key that operates all master keyed locks or cylinders in a key system or a part thereof.

**Master pin** - a cylindrical shaped tumbler, flat or crowned on both ends, used between the bottom and top pins to create additional shear lines.

**Pin tumbler** - usually a cylindrical shaped tumbler; three types are used: bottom pin, master pin, and \top pin.

**Plug** - the part of the cylinder which contains the keyway, with tumbler chambers usually corresponding to those in the cylinder shell.

**Plug follower** - a tool used to remove the plug while retaining the top pins and springs, and possibly other components in the shell.

**Rim cylinder** - a cylinder with a tailpiece to actuate the lock mechanism typically used with surface applied locks and attached to the lock or door with a mounting plate and machine screws.

**Shim** - a thin piece of curved stainless steel used to unlock the cylinder plug from the body by separating the pin tumblers at the shear line.

**Sidebar** - the secondary locking device operated with a patented side bit milling design such as found in the Primus XP cylinder mechanism.

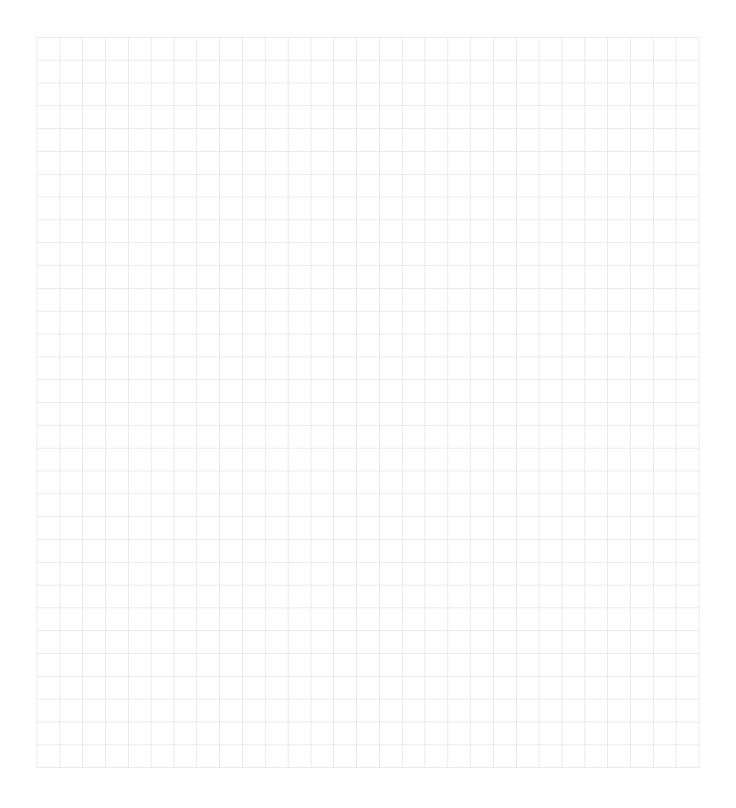

**Tailpiece** – an actuator attached to the rear of a cylinder, parallel to the plug, used on rim, key-in-knob or other special cylinders.

**Top pin** – a cylindrical shaped tumbler, flat or crowned on both ends, that is installed in direct contact with the tumbler spring.

**Tumbler** - a movable obstruction of varying length in a cylinder that makes direct contact with a key or another tumbler and prevents an incorrect key from operating the lock or cylinder.
