FS23M Dual Failsafe Spacesaver® Bolt Lock

The FS23M dual failsafe feature is available only from SDC. Conventional failsafe locking bolts rely solely on a spring to retract the bolt while the FS23M bolt will unlock with or without the assistance of the spring. This is the only electric bolt lock listed by the California State Fire Marshal for locking of perimeter entrance and emergency exit doors after-hours.

FEATURES

DUAL FAILSAFE
The SDC designed and patented FS23M is locked when energized. Recommended for safety applications, the door unlocks automatically when power is interrupted by the access control, power failure or a signal from the fire life safety system.

Large repelling magnets are located within the bolt and strike. When power is interrupted the bolt is retracted and held back by a spring. Should the spring fail, repelling magnets eject the bolt from the strike, unlocking the door.

While designed for perimeter applications the performance characteristics of the FS23M make it the first choice for all interior or exterior openings where the use of an electric bolt lock is applicable.

SPECIFICATION GRADE SOLENOIDS
All Spacesaver® lock solenoids are manufactured by SDC to precision specifications. SDC solenoids are capable for superior overall performance in both force and longevity, providing years of service compared to other manufacturers off-the-shelf or commercial grade designs.

BOLT DESIGN
The bolt is made of a lightweight and extremely resilient nylon material. While lack of weight enables the magnet to eject the bolt, an inherent feature is powerful and smooth operation. The longevity of this lock is unsurpassed compared to electromechanical locks with steel bolts with abrasive metal to metal interaction.

Additional bolt features include:
• 2500lbs Bolt Strength
• Hardened Magnet Core, Resistant to Metal Cutting Saws

MODELS

FS23MI Dual Failsafe 12/24VDC
FS23MWDI Dual Failsafe 12/24VDC, specifically for wood frames

3| SPECIFY OPTIONS

B  Magnetic Bolt Status Switch
   SPDT 0.25 Amp @ 30VDC
   Indicates bolt locked and bolt unlocked.

D  Mechanical Door Position Switch
   SPDT 5 Amps @ 30VDC
   Integral to the auto relock ball switch assembly.
   Indicates, door closed and door open. Recommended for minimum security applications only.
